How DJI and non-DJI operators complete a Stravyx job

Same shop | Non-DJI never uses Cloud API | Manual is the spare tyre

Stravyx Pty Ltd ACN 696 964 271 | 17 Aug 2026 | CONFIDENTIAL

Source: docs/dji-vs-nondji-operator-journeys.md. Authority: ADR 0005 and docs/dji-integration-architecture.md. Glossary: docs/dji-live-ops-path-comparison.md.

One-line answer: Non-DJI operators never use DJI Cloud API. They finish jobs in Stravyx with status taps and manual upload. Supported DJI operators may also plug Pilot 2 into Stravyx for live status and auto photos - same booking, same customer downloads.

1. What is the same for everyone

Stravyx is the marketplace (the shop):

1. Customer books and pays one Network Price.
2. Eligible licensed companies (ReOC) see the offer.
3. First to Accept wins; others are locked out. Full street address appears after Accept (suburb only before).
4. Operator flies the site.
5. Files land in Stravyx, sit held (quarantine), then the operator Releases them.
6. Customer downloads from Stravyx - not from DJI, Autel, or email.

The customer never needs a DJI or Autel login. Brand of aircraft must not change who can win the job or what the customer pays. Connecting a DJI remote is never required to tap Accept.

2. What is different (the plug, not the shop)

	Non-DJI (Autel, Skydio, others)	Supported DJI (after privacy)
Fly in	Their own flying app	DJI Pilot 2 on the handheld remote
DJI Cloud API	Never	Optional hose: remote talks to our cloud
Progress in Stravyx	Operator taps Ready -> Airborne -> Complete	Taps can be filled from live radio; optional coarse map pin
Files into Stravyx	Copy off card/drone, upload in the website for this job	Pilot 2 can auto-upload, or still upload by hand
If radio/privacy off	This is their path	They fall back to the same taps + upload

DJI Cloud API = DJI's protocol where Pilot 2 (or a Dock) talks to Stravyx-hosted servers (not FlightHub 2). Autel/Skydio cannot speak it. A later Autel connector would be their API, not DJI's.

Manual path = no live drone-to-Stravyx link. Status taps + signed upload. Spare tyre for non-DJI, unsupported DJI, APP 8 gate still open, or radio down.

3. Side-by-side journey

Step	Customer	Non-DJI operator	DJI operator (live plug on)
Book	One price	Same offer board	Same
Accept	Job taken	First tap; then address	Same - no connect DJI first

Fly	-	Autel/Skydio/etc. app	Pilot 2 as usual
Progress	Track Job	Taps in Stravix	Live postcards; optional pin
Files	-	Manual upload for this job	Auto-upload and/or manual
Release	Downloads appear	Confirms files belong to this job	Same
Cloud API	Never	Never	Only if Pilot 2 joined Stravix

4. User stories

Story 1 - Brooke (Autel only)

Priya books a roof inspection. Brooke's Autel-only company taps Accept first. Brooke flies in Autel's app. In Stravix she taps Ready, Airborne, Complete. She copies photos to a laptop and Uploads for this job. Files are held. She presses Release. Priya downloads from Stravix. She never opened DJI software. DJI Cloud API is not involved.

Story 2 - Alex (supported DJI, live radio allowed)

Same booking. Alex wins. His remote is already in his company's Stravix room. He assigns aircraft SN-123, flies in Pilot 2. Priya may see a pin. Photos can auto-land in our cupboard. He Releases. Priya still downloads from Stravix, not FlightHub. If the radio dies, he finishes like Brooke: taps + manual upload. The job must not be stuck.

Story 3 - Alex (DJI kit) while APP 8 is still open

Live radio is off in production. Alex flies in Pilot 2 locally (screen on the remote, files on the card) and completes exactly like Brooke. Owning DJI hardware does not force Cloud API.

Story 4 - Mixed fleet (one company)

Chris has a Matrice 30 and an Autel. Matrice job (after privacy): he may use Cloud API. Autel job: always manual for that aircraft. The Autel cannot join DJI Cloud API. Accept is one tap either way. He does not need the Matrice online to take an Autel job.

Story 5 - DJI model we do not support

Dana flies a consumer DJI Mini. It is not on our Cloud API hardware list. She is manual, same as Autel. We do not tell her to use Cloud API anyway.

Story 6 - Two operators racing; customer does not pick a brand

Priya sees one Network Price, not DJI vs Autel. We must not rank who gets the job by whose DJI is online. Winner might be Brooke (manual) or Alex (live). Priya still gets raw photos from Stravix after Release.

Story 7 - Radio outage on a DJI job already accepted

Alex accepted, then the controller cannot reach Stravix. He still taps Complete and uploads. Same Release. Same customer download.

Story 8 - Later (not Live-ops A)

If we add an Autel/Skydio connector, Brooke might one day get auto-upload via their cloud, not DJI's. Maps/3D (Layer 2) stay a Stravix processing product - Brooke is not sent to FlightHub.

5. What we will not do

- Require DJI Cloud API (or any DJI account) to Accept or to be paid.
- Make customers log into a drone-maker website.
- Leave a job stranded because live radio failed.
- Rank dispatch by device-online.
- Pretend manual Track Job is a live map (status labels only, unless we later add something like phone GPS - separate product/privacy decision).
